

## Module 53, Chemical Safety Assessment – The Science And Theory For Risk Characterisation

**For dates and venues, please visit: [CHCS Training](#)  
This Module will be delivered, live, online**

Under good practice for Product Stewardship and to meet requirements under REACH, it is necessary to assess the risk from the known uses of the materials you supply.

So that you know if a particular use has an acceptable level of risk, an assessment is needed in which scenarios for exposure are compared with known hazardous properties. This process of comparison between hazard and exposure is known as risk characterisation and is needed for REACH registration of substances and presented as the 'Chemical Safety Report' (CSR).

The findings of the CSR are summarised in the extended SDS of a substance, and if supplying a mixture, the substances present in the mixture that contribute to any hazard must all be considered.

This course, delivered live, online over two consecutive mornings, aims to cover the basic science and principles of chemical safety assessment and the CSR, dealing mainly with the technical concepts including the DNEL / DMEL and PNEC and the science behind exposure estimates.

The module also considers how the Chemical Safety Report is to be used as a basis of preparing exposure scenarios to prepare the extended SDS for substances and mixtures. It provides a good foundation for [Module 20 'The Extended SDS - Understanding Exposure Scenarios'](#).

Exercises and illustrations of real CSR will be held throughout the day to assist in the understanding of the concepts introduced.

### PLEASE NOTE: IMPORTANT PRE-TRAINING INFORMATION

**This is not an "Introduction to REACH" course; some knowledge of the principles of REACH and chemistry is essential. This is predominantly a science-based day to consider how to characterise risk.**

During the practical session, we will demonstrate several tools including the Chemical Safety Assessment and Reporting tool (CHESAR), the targeted risk assessment model (ECETOC TRA) and EUSES (European Union System for the Evaluation of Substances) software.

### SAMPLE PROGRAMME

- Technical and regulatory background
- Hazard assessment - 'Chemical Safety Assessment'
- Exposure considerations
- Introduction to risk characterisation and models
- The Chemical Safety Report
- Close with questions and discussion

### Who Should Attend?

The module is designed for those involved in chemical safety assessment and communication, within the context of product stewardship and with a particular focus on supply regulations, including REACH and writing extended SDS

Those attending should already understand the broad concepts of chemical supply legislation, including REACH, and also understand the science of data assessment including physico-chemical data, basic toxicology and basic ecotoxicity.

**Note: The regulatory and technical requirements covered by this module relate to EU and GB REACH.**

[enquiries@chcs.org.uk](mailto:enquiries@chcs.org.uk)  
[www.chcs.org.uk](http://www.chcs.org.uk)

## Benefits Of Attending

Attendance will help ensure that you are up to date with the requirements for the preparation of exposure scenarios and exposure estimates. To ensure the most effective training with optimum involvement in participative exercises, there will be a limit of 14 on the number attending.

Module 53 should be seen as an extension of the scientific content of the toxicology and ecotoxicology modules and the scientific basis for [Module 20 'Exposure Scenarios'](#) module. **If planning to attend Module 20, Module 53 will provide an important basis for understanding the technical content.**

## What You Will Learn

This module will cover the following points to assist writers

- Technical and regulatory background, e.g.:
  - Basic principles of risk assessment, Legislative framework, Environmental and health hazards, Exposure modes, Background to EU methods / Technical Guidance Document / models /
- 'Chemical Safety Assessment'
  - Interpretation and understanding of test data, What to look for in test reports, Quality of supplier safety data sheets, Looking for anomalies in data, Difficult materials, Identification of hazard from minimal data, Computer models, read across and educated guessing (SAR) Environmental and health hazards
- Derived Endpoints
  - Understanding PNECs and DNELs Patterns of exposure
- Exposure Scenarios / Exposure Estimates
  - Patterns of exposure, Understanding exposure scenarios, Use of default data, Environmental and workplace exposure, Exposure of general public
- The Chemical Safety Report
  - Overview of document, Purpose of document, Formatting and content, Communication through supply chain, Links with SDS
- 'Advanced' testing and data gathering; further 'higher tier' options for risk assessment
  - Environmental fate and the effects on treatment plants, Persistence and bioconcentration, long-term health effects

## Module Tutor

The training will be given by Mark Selby of Denehurst Chemical Safety Ltd. Mark had many years' experience with a major test house before setting up his own business and runs the very successful CHCS modules on ecotoxicology, advanced SDS writing and Exposure Scenarios.

## EU Exit of the UK

The departure of the UK from the EU does not impact on the either the importance of the understanding and collating hazard and exposure data to estimate risk.

## Module Presentation

This training will be delivered live, online using proprietary software.

### Comments From Delegates Attending Previous Courses

*"Great depth of knowledge, giving good background to the material"*

*"Very good examples provided throughout the day. Very good practical/real time demos"*

*"The second day was really beneficial - the practical training on CHESAR and link with other exposure tools and IUCLID was great"*

### Reserving A Place

You can reserve a place at this course, online by visiting [Chemical Hazards Training](#), finding the next occurrence of the course and completing the on-line booking form. Courses are only available to CHCS Members. If you are not an existing member and would like to join, again, the process is simple and you can complete our online Membership Registration form at: [Join Us](#).

Our online courses are £285 (+VAT), but we offer a **discounted price** of only £260 (+VAT) which expires 6 weeks before the date of the course. Please see the online event for more details.

### Please note these Conditions

Delegates can be substituted at any time, subject to payment of a membership fee if applicable. However, once booked, the full fee is payable. As this is a limited space training event, refunds can only be made if CHCS is notified in advance, **and** is able to successfully re-offer the place to another delegate.

CHCS reserves the right to alter or cancel the programme due to circumstances beyond our control, including insufficient interest. If CHCS cancels, then refunds will be made. For registrations made within 5 weeks of the course date, we only accept payment by Card.
